EMPATHY BRIEF

RATHAMMA

Formar/Balasupetta Village

SHEET 01 / EMPATHY MAP

SAYS

- “I am not always sure which disease is affecting my crop.”
- “Sometimes I notice the problem only after it spreads.”
- “I need a quick way to identify the disease.”
- “I want to know how serious the disease is.”

THINKS

- “Is this disease going to damage my entire crop?”
- “Will I lose my harvest because of this?”
- “Can I identify the disease without going to an expert?”
- “How much yield can I expect?”

DOES

- Observes crop leaves regularly.
- Takes photos of affected plants.
- Asks other farmers for suggestions.
- Uses traditional methods to manage crop diseases.
- Visits agricultural experts when the problem becomes serious.
- FEELS

FEELS

- Worried when disease symptoms appear.
- Uncertain about the correct treatment.
- Stressed about possible crop loss.
- Relieved when the problem is identified early.

PAIN POINT

Difficulty in identifying crop diseases early and understanding their severity.

NEED

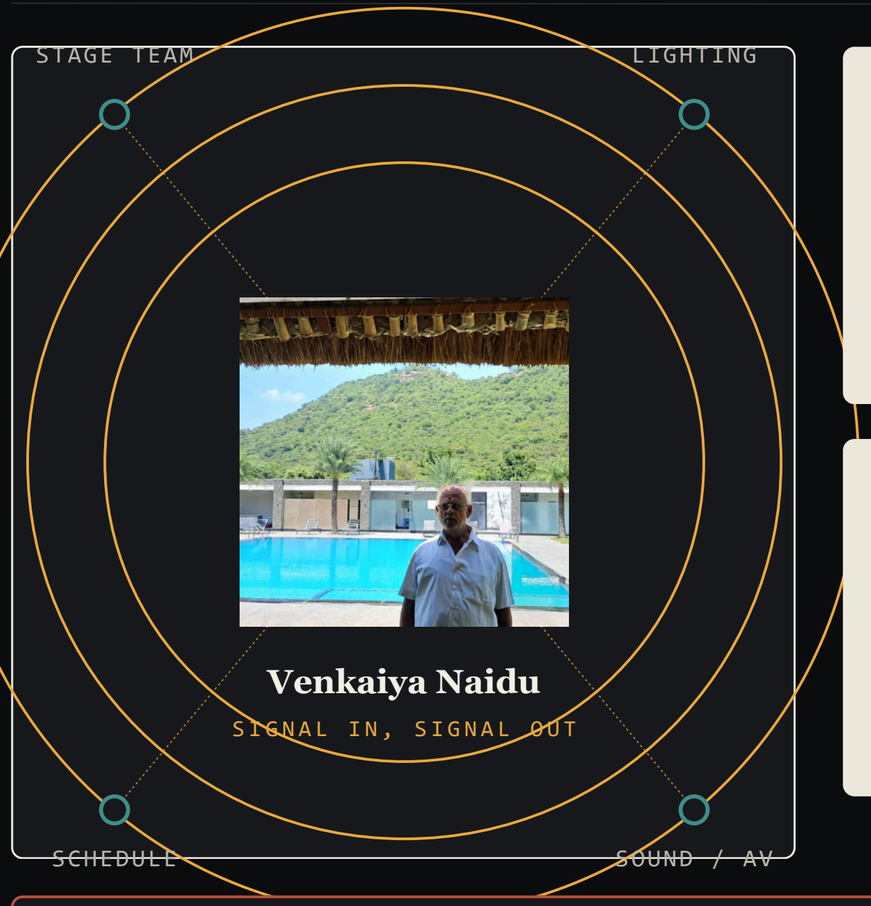

A simple AI-based system that can identify disease and show its severity quickly.

EMPATHY BRIEF

SHEET 02 / EMPATHY MAP

VENKAIYA NAIDU

Formar/ Nellore

SAYS

- “I can identify some diseases from experience, but not every disease.”
- “Different diseases can look very similar.”
- “Weather changes can also affect my crops.”
- “I need reliable information before taking action.”

THINKS

- Is my crop actually affected by disease?”
- “Is the disease getting worse?”
- “Will this affect my final yield?”
- “Can technology help me make better decisions?”

DOES

- Checks plants manually.
- Compares symptoms with previous experience.
- Consults agricultural experts when unsure.
- Monitors weather and crop conditions.
- Applies treatment based on available advice.

FEELS

- Confident with familiar diseases.
- Confused by unfamiliar symptoms.
- Concerned about incorrect treatment.
- Worried about reduced production.

PAIN POINT

Limited access to reliable disease and crop-health information when facing unfamiliar symptoms.

NEED

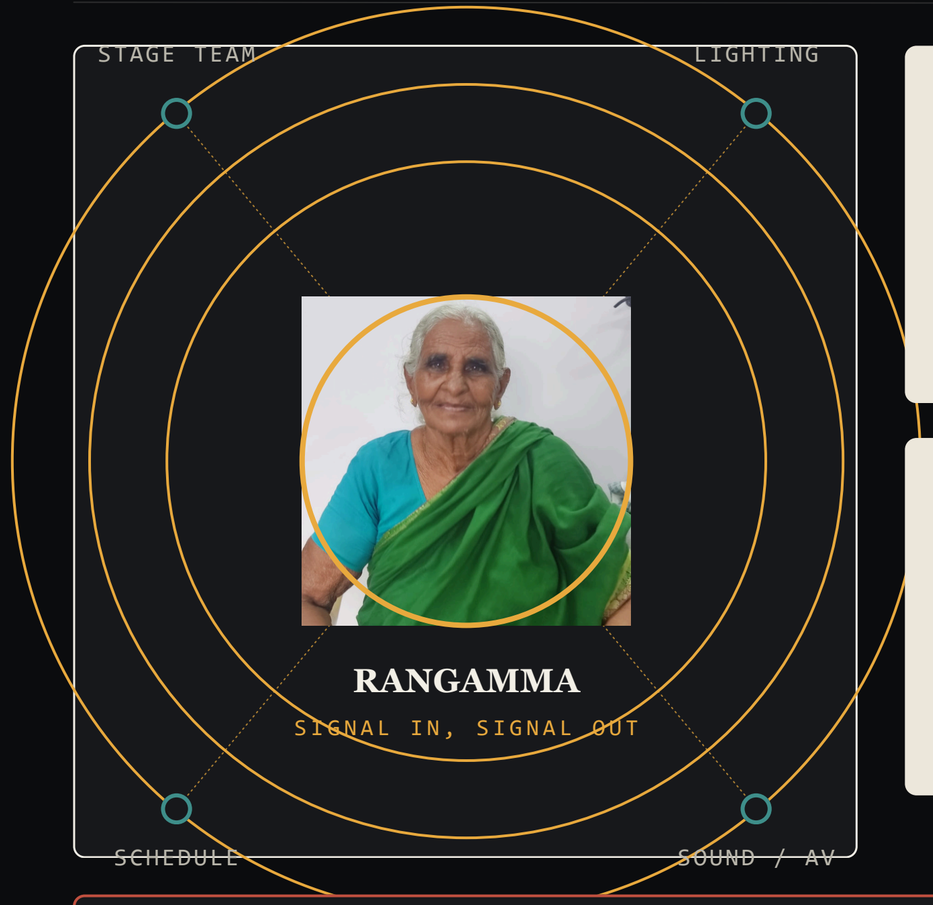

Accurate AI-based disease and severity information to support farming decisions.

EMPATHY BRIEF

RANGAMMA

Formar/Nellore

SHEET 03 / EMPATHY MAP

SAYS

- “I need to know the disease before it spreads to other plants.”
- “I want to know how much of my crop is affected.”
- “Checking every plant manually takes time.”
- “Yield prediction would help me plan my harvest.”

THINKS

- “How quickly will this disease spread?”
- “How much production will I lose?”
- “Should I take action immediately?”
- “How much crop can I expect at harvest?”

DOES

- Plans lighting positions and requirements.
- Coordinates with the stage and props teams.
- Adjusts lighting according to the stage design.
- Communicates technical requirements.
- Tests and sets up lighting before the event.

FEELS

- Frustrated when stage changes happen unexpectedly.
- Uncertain when information is incomplete.
- Pressured as the event deadline approaches.
- Confident when the final stage plan is clearly communicated.

PAIN POINT

Difficulty in monitoring disease spread and estimating its impact on crop yield.

NEED

Disease severity analysis and yield prediction in one system.

EMPATHY BRIEF

SHEET 04 / EMPATHY MAP

Khadeejah Nuhaa N

Student/ Biotechnology

SAYS

- “Reading about diseases is different from actually seeing them.”
- “I want to understand how different diseases affect crops.”
- “Practical learning would be more interesting.”
- “3D visualization could make learning easier.”

THINKS

- “What does a real diseased crop look like?”
- “How does disease severity change?”
- “Can I explore different diseases safely?”
- “Can AR/MR help me understand crop health?”

DOES

- Studies crop diseases from textbooks.
- Looks at images and videos.
- Searches online for additional information.
- Learns through practical activities.
- Uses digital learning resources.

FEELS

- Curious about real-world crop problems.
- Sometimes bored with only theoretical learning.
- Interested in immersive technology.
- Excited about interactive 3D learning.

PAIN POINT

Difficulty in understanding crop diseases and severity through only traditional learning materials.

NEED

An immersive AR/MR learning environment where students can explore crop diseases visually.

EMPATHY BRIEF

SHEET 05 / EMPATHY MAP

Lakshmi Bhargavi R

Student/ Biotechnology

SAYS

- “I want to see how AI can solve real agricultural problems.”
- “I want practical experience with computer vision.”
- “The combination of AI and AR/MR is interesting.”
- “I want to understand how an AI prediction reaches the user.”

THINKS

- “How does the disease detection model work?”
- “How can severity be calculated?”
- “How is yield predicted?”
- “How can AI results be visualized in AR/MR?”

DOES

- Learns AI/ML concepts.
- Works with datasets and models.
- Experiments with computer vision.
- Uses software tools for projects.
- Explores emerging technologies.

FEELS

- Curious about AI applications.
- Excited about combining AI and MR.
- Challenged by complex technologies.
- Motivated by practical projects.

PAIN POINT

Limited opportunities to experience an end-to-end AI + AR/MR agricultural system.

NEED

A practical platform connecting AI models with an immersive AR/MR application.
